

Reporting checklist for randomised trial.

Based on the CONSORT guidelines.

Instructions to authors

Complete this checklist by entering the page numbers from your manuscript where readers will find each of the items listed below.

Your article may not currently address all the items on the checklist. Please modify your text to include the missing information. If you are certain that an item does not apply, please write "n/a" and provide a short explanation.

Upload your completed checklist as an extra file when you submit to a journal.

In your methods section, say that you used the CONSORT reporting guidelines, and cite them as:

Schulz KF, Altman DG, Moher D, for the CONSORT Group. CONSORT 2010 Statement: updated guidelines for reporting parallel group randomised trials

			Page Number
Title and Abstract			
Title	#1a	Identification as a randomized trial in the title.	
Abstract	#1b	Structured summary of trial design, methods, results, and conclusions	
Introduction			
Background and objectives	#2a	Scientific background and explanation of rationale	
Background and objectives	#2b	Specific objectives or hypothesis	
Methods			
Trial design	#3a	Description of trial design (such as parallel, factorial) including allocation ratio.	
Trial design	#3b	Important changes to methods after trial commencement (such as eligibility criteria), with reasons	

Participants	#4a	Eligibility criteria for participants
Participants	#4b	Settings and locations where the data were collected
Interventions	#5	The experimental and control interventions for each group with sufficient details to allow replication, including how and when they were actually administered
Outcomes	#6a	Completely defined prespecified primary and secondary outcome measures, including how and when they were assessed
Outcomes	#6b	Any changes to trial outcomes after the trial commenced, with reasons
Sample size	#7a	How sample size was determined.
Sample size	#7b	When applicable, explanation of any interim analyses and stopping guidelines
Randomization - Sequence generation	#8a	Method used to generate the random allocation sequence.
Randomization - Sequence generation	#8b	Type of randomization; details of any restriction (such as blocking and block size)
Randomization - Allocation concealment mechanism	#9	Mechanism used to implement the random allocation sequence (such as sequentially numbered containers), describing any steps taken to conceal the sequence until interventions were assigned
Randomization - Implementation	#10	Who generated the allocation sequence, who enrolled participants, and who assigned participants to interventions
Blinding	#11a	If done, who was blinded after assignment to interventions (for example, participants, care providers, those assessing outcomes) and how.
Blinding	#11b	If relevant, description of the similarity of interventions
Statistical methods	#12a	Statistical methods used to compare groups for primary

and secondary outcomes

Statistical methods [#12b](#) Methods for additional analyses, such as subgroup analyses and adjusted analyses

Results

Participant flow diagram (strongly recommended) [#13a](#) For each group, the numbers of participants who were randomly assigned, received intended treatment, and were analysed for the primary outcome

Participant flow [#13b](#) For each group, losses and exclusions after randomization, together with reason

Recruitment [#14a](#) Dates defining the periods of recruitment and follow-up

Recruitment [#14b](#) Why the trial ended or was stopped

Baseline data [#15](#) A table showing baseline demographic and clinical characteristics for each group

Numbers analysed [#16](#) For each group, number of participants (denominator) included in each analysis and whether the analysis was by original assigned groups

Outcomes and estimation [#17a](#) For each primary and secondary outcome, results for each group, and the estimated effect size and its precision (such as 95% confidence interval)

Outcomes and estimation [#17b](#) For binary outcomes, presentation of both absolute and relative effect sizes is recommended

Ancillary analyses [#18](#) Results of any other analyses performed, including subgroup analyses and adjusted analyses, distinguishing pre-specified from exploratory

Harms [#19](#) All important harms or unintended effects in each group (For specific guidance see CONSORT for harms)

Discussion

Limitations [#20](#) Trial limitations, addressing sources of potential bias, imprecision, and, if relevant, multiplicity of analyses

Generalisability [#21](#) Generalisability (external validity, applicability) of the trial findings

Interpretation	#22	Interpretation consistent with results, balancing benefits and harms, and considering other relevant evidence
Registration	#23	Registration number and name of trial registry

Other information

Interpretation	#22	Interpretation consistent with results, balancing benefits and harms, and considering other relevant evidence
Registration	#23	Registration number and name of trial registry
Protocol	#24	Where the full trial protocol can be accessed, if available
Funding	#25	Sources of funding and other support (such as supply of drugs), role of funders
